What is git ?

1) Git is SCM (source control management) system.

2) Also known as VCS (Version control system)

3) Linus Torvalds - who created linux as well → developed

Git features -

1) Easy to use

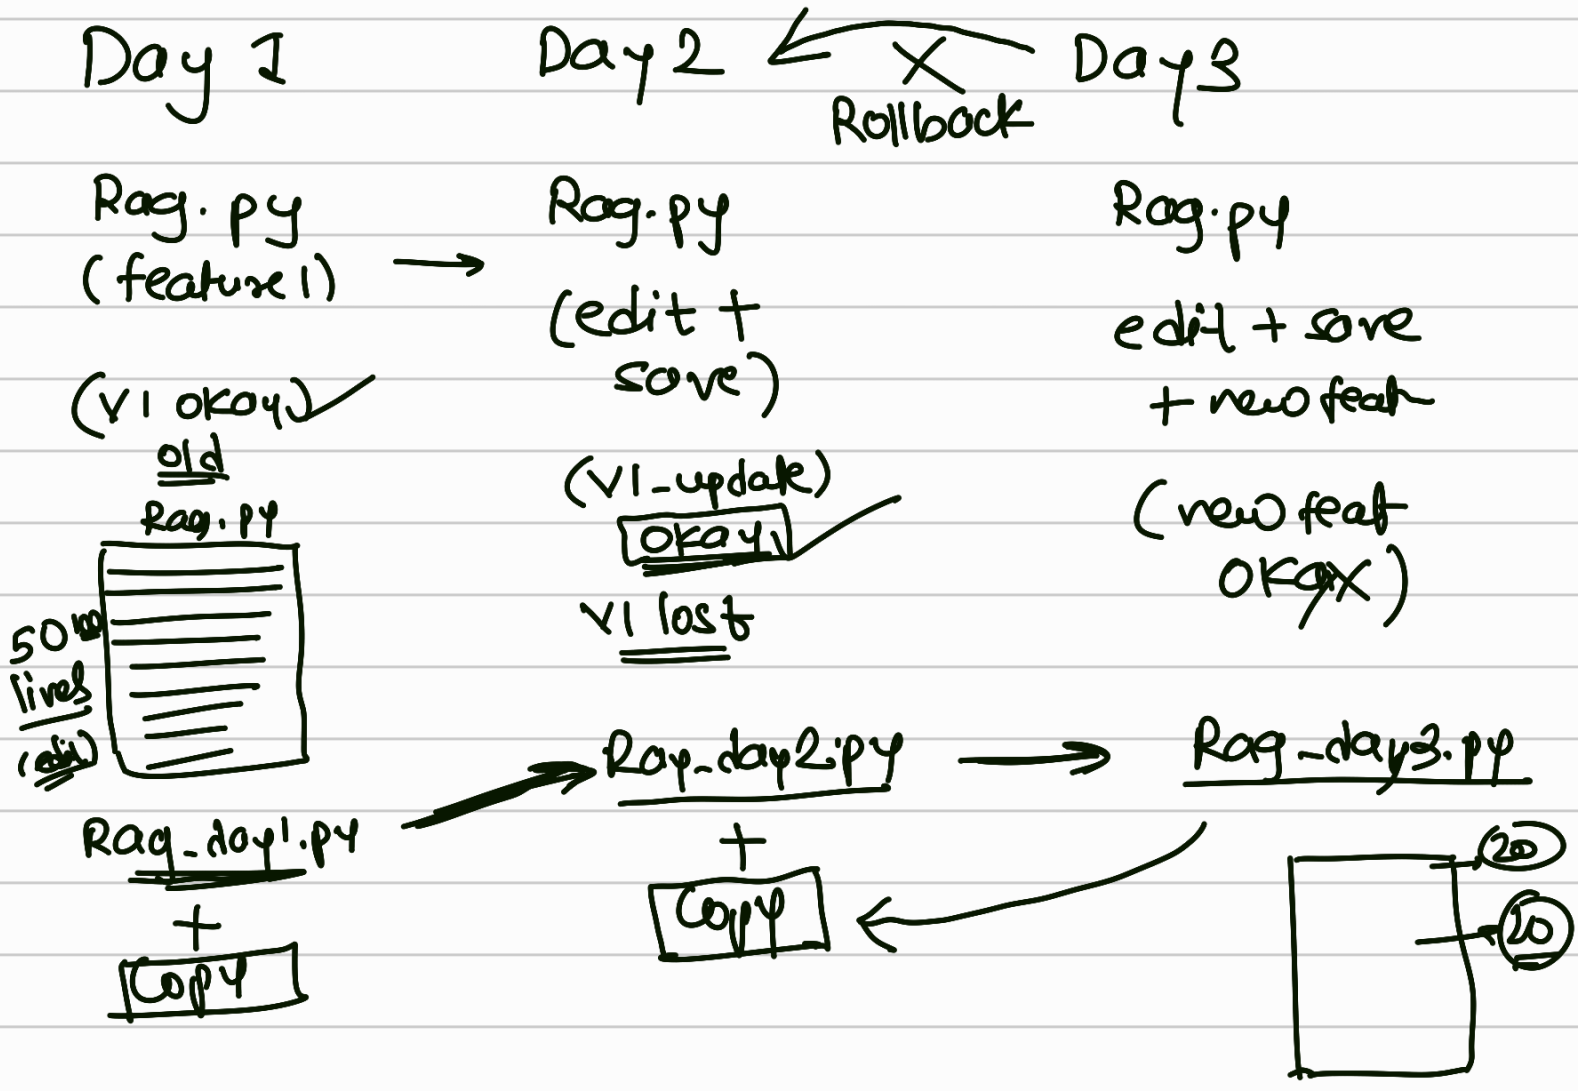

2) lightweight

3) Distributed -

4) popular -

Why git is necessary (Problem 2)

without git (VCS)

Manual versioning problem

① managing huge amount of files.

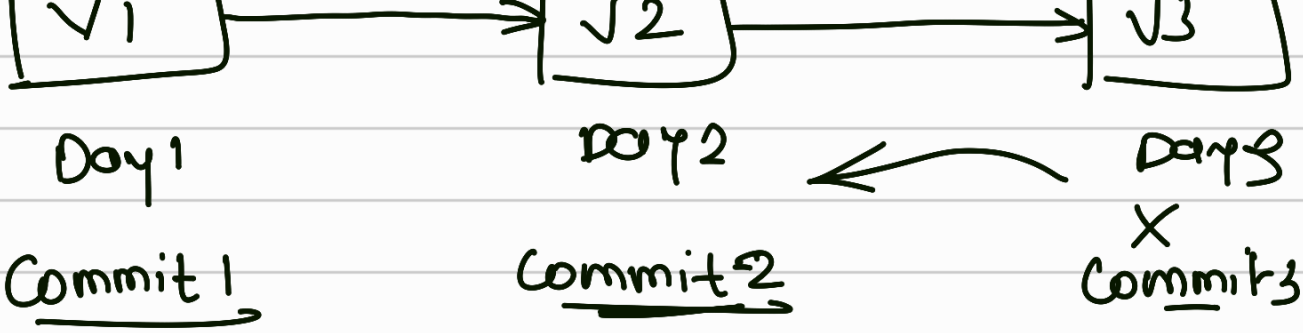

1000+ files.

② Tracking impossible.

③ Team collaboration impossible

④ data loss

How git solves this problem

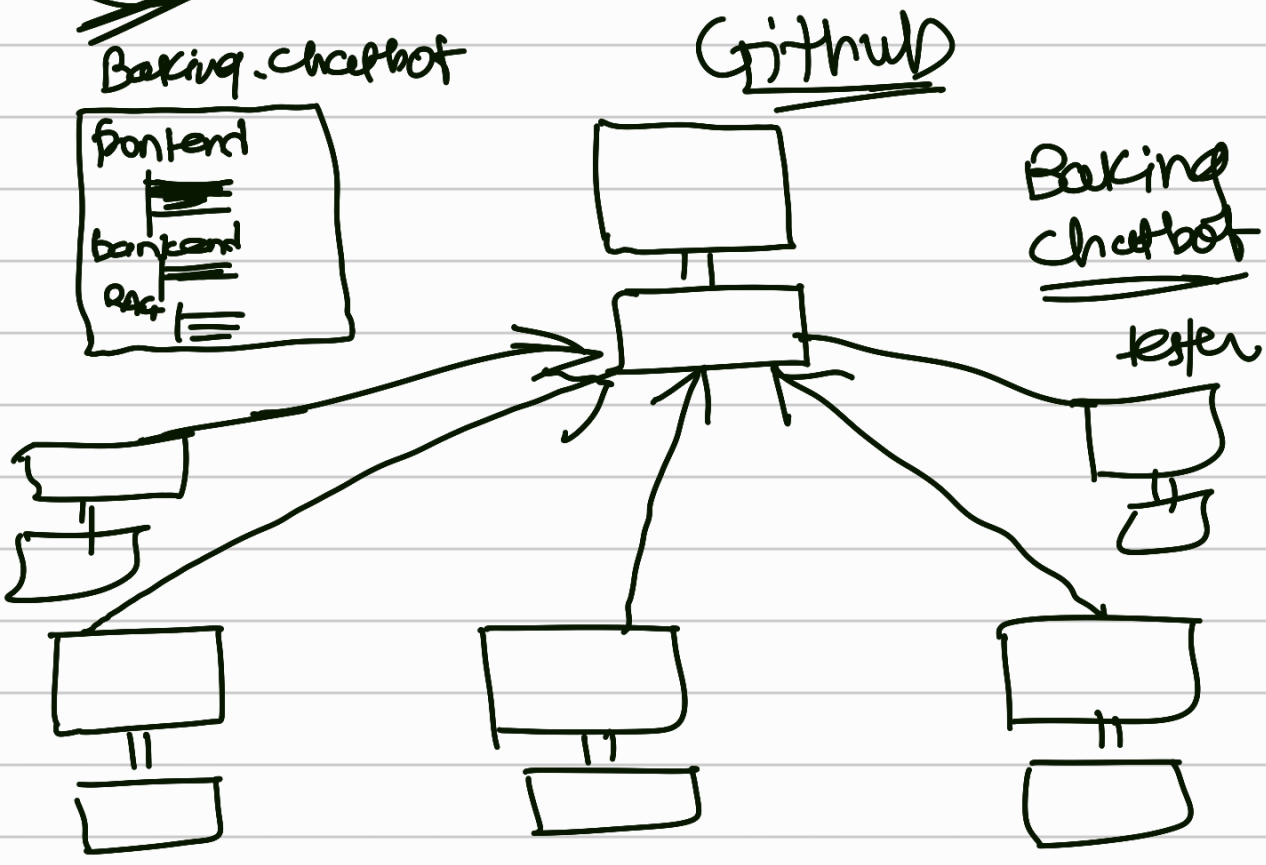

git checkout Commit2

Roqib

30 Days

20

	Manual	Git
Version tracking	manual	Automatic
Rollback	impossible	one command
1000+ files	1000+ files	Single Repo
Team Collaboration	Unknowns	full audit
Storage	more Storage v1 v2 v3 v4	differences maintain v1 v2 v3 v4

setup No setup easily

3 types of version control system

① local version control system (1970s)

② Centerlized VCS (1990's)

③ Distributed VCS (2000s)

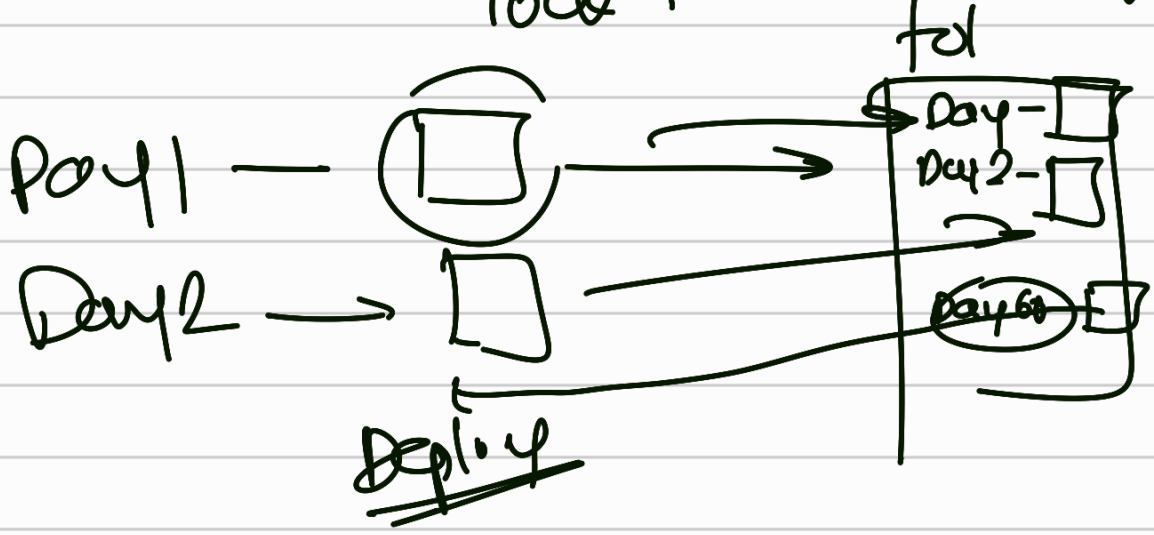

[] local VCS

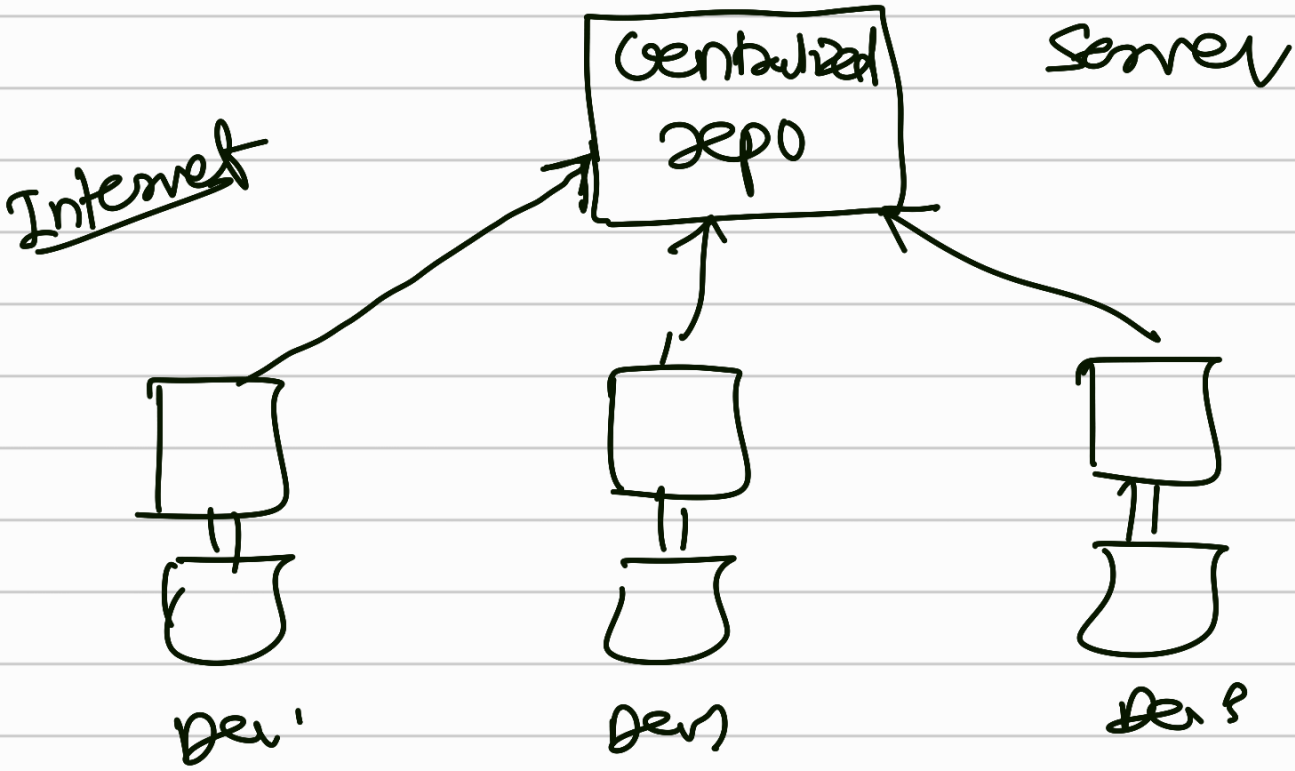

✓ No team access

✓ Device lock in

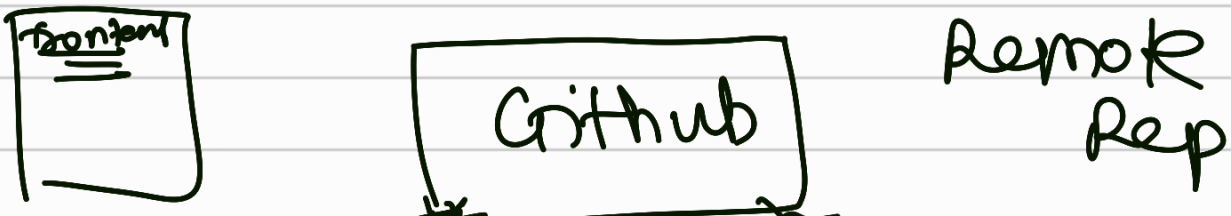

✓ manually maintain version

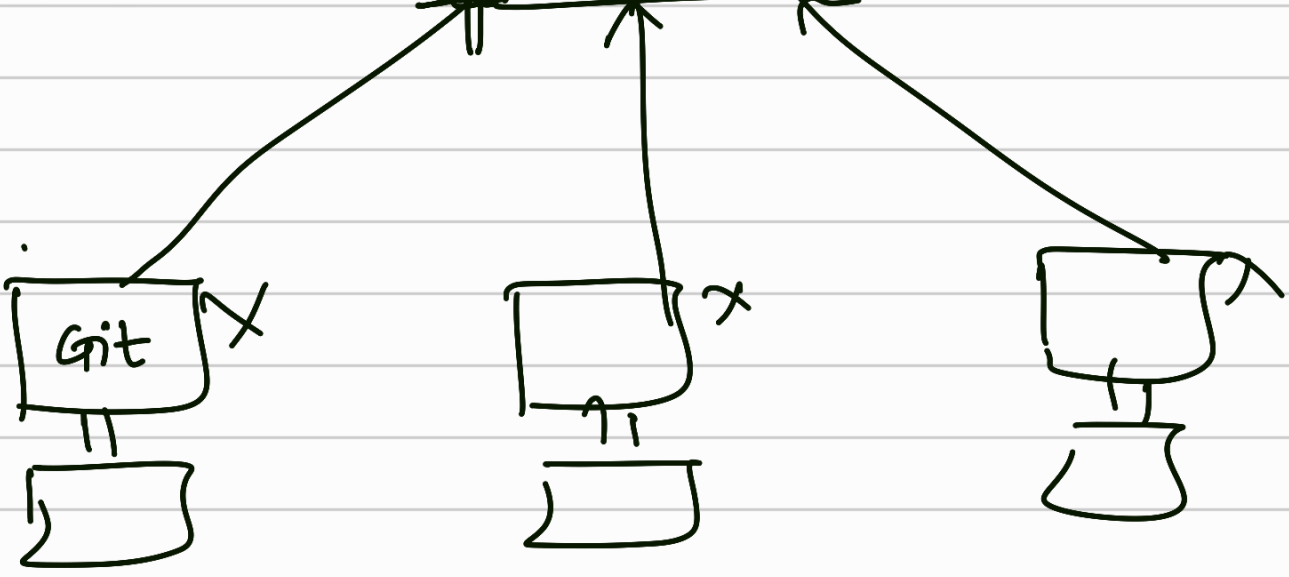

2) Centeralized VCS

3) Distributed VCS - git & github
